Case-Based Presentations @

Step 1: Group Students & Distribute Cases

Step 2: Students review & complete cases

₹

Student groups work independently: Working within a given time limit students will complete their case answering questions that will eventually lead them to develop diagnosis, treatment, and recovery plan.

Group Presentations: Student will create and upload a presentation that provides an overview, diagnosis, treatment and recovery plan for their assigned case. Groups will then be randomly selected (representing all of the assigned cases) and given ~ 5 minutes to present their solution.

Engage students and ask questions: Faculty should recap each case and provide more context (solutions and answers) when needed.

Provide solutions and support: Post the preferred solution to each case on LCMS+ for students to review. Also, after reviewing each groups uploaded presentation, ensure that students completed their assigned case in a satisfactory manner and provide support if needed.

Step 3: Students present each case

Step 5: After Class
